

# Application

3. App3, 4 have no relation with app1. They just are deployed on node1, and they use RI1

Qestion2: Could we eliminate these apps? app4 really has nothing to do with app1

1.App1 depends on RI1, RI2, app2, app5. App5 depends on RI3, app6. RI3, app6 maybe depend on other things.

2.One part of app1 is deployed to node1, another part is deployed to node2. Both parts use RI1

node1 means app1 instance responsible for we can't node1 these RI1 or then

4. No other app deployed on node2 uses RI2

0.The blue ones are we have currently, the red ones are we are going to add.

Qestion1: Could we eliminate app6 maybe depend on other things? don't show in this tree. So this is an essential difference between v
